**Sargus and Pursuit Spinning Reel Drag Knob and Spool Shaft Improvement**

There has been a change of the thread pitch on the spool shafts, on all models of the Sargus and Pursuit spinning reels. An undercut groove under the spool shaft ratchet has been added to identify that the threads are a finer pitch. The finer pitch threads will give an improved drag adjustment to accommodate retrieves that demand a softer touch. The threads in the drag knobs have also been changed to match the threads of the spool shafts.

If the spool shaft and/or drag knob are going to be replaced it must be noted if the spool shaft has an undercut groove on it. If the spool shaft does not have an undercut groove on it, a new finer pitched threaded spool shaft and drag knob must be replaced.
